

I have been a voom customer for the last 9 months, and voom is creating more competition in the hd an satellite spectrum. Thanks to voom i watch over the air networks CBS, etc using my antennae and the voom box. This is a great step foreward towards using the digitial spectrum. Voom has over 40 channels in HD and is spearheading the HD revolution and movement towards the HD reality in broadcasting. Voom has done what NO other dbs provider does , transmit over 42 channels in HD. All other DBS providers provide 5 to 8 channls. The movement towards freeing up the analog spectrum will truly be enhance by voom being in the arena, and competition real competion is enhance by having voom. The other two providers are in bed with each other. Please keep voom alive . thank you.. We love Voom.
